

Learners interpreting machine explanations during study-plan revision

Fictional Team Birch | Entirely fictional | Local identifier REC-002

Abstract and scope

This is page 1 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Background

This is page 2 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Protocol and questions

This is page 3 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Method

This is page 4 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Method - sampling

Twelve volunteers who had opened at least one explanation were interviewed using a fictional semi-structured guide. Volunteers were not sampled to estimate prevalence and no non-user interviews were available.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Analysis plan

This is page 6 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Results

This is page 7 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Findings - Theme 2: inspect, do not defer

Participants described the explanation as a reason to inspect the suggestion, not as proof that it was correct. Several authored accounts described rejecting a suggestion after checking task requirements.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Limitations

This is page 9 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Audit notes

This is page 10 of an entirely fictional record created for Course 17. It exists so learners can distinguish a locator from primary evidence, preserve denominators, and calibrate claims to design. No person, institution, publication, observation, quotation, or result is real. Any extraction must name this PDF, the exact page, the relevant table or paragraph, and a verification decision.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.

Limitations

Volunteer accounts do not establish prevalence, effectiveness, or the experiences of non-users. The themes are fictional teaching material and cannot be transferred to a real population.

Verification boundary: use this PDF page as the primary object; extracted JSON and RAG chunks are locators only.

Not citable as real research. No factual, causal, legal, or policy claim is authorised.
